1. Platform Overview

1.1 Vision

Hidayah Connect and TeachUs are twin global teacher-marketplace platforms — Hidayah Connect for Islamic education (Quran, Tajweed, Hifz, Arabic, Islamic Studies), and TeachUs for mainstream academic education (CBSE/ICSE/State Board/GCSE/IB and core subjects). Both run on the same underlying architecture: teacher onboarding, course creation, scheduling, escrow-based payments, and payouts, so this specification applies to both unless a section says otherwise.

1.2 User Types

- Teacher — creates a profile, lists courses, teaches classes, receives payouts.
- Student — discovers teachers/courses, books trials or full courses, attends classes, tracks progress.
- Administrator — approves teachers and courses, manages disputes/refunds/escrow, monitors revenue and payouts.

1.3 Core Modules

- Teacher Marketplace — discovery, profiles, filtering, ratings.
- Student Marketplace — search, booking, purchase, progress tracking.
- Admin Portal — approvals, disputes, financial oversight, CMS.
- Payment System — Razorpay (India) / Stripe (international).
- Wallet & Escrow System — holds student payments until milestones release them to teachers.
- Recording System — optional premium add-on with a fixed storage lifecycle.

1.4 Teacher Status & Badge System

Every teacher account carries one status and one badge level at all times:

Status	Meaning
Pending Verification	Registered, awaiting admin review
Verified	Admin-approved, basic checks passed
Active	Live on the marketplace, can teach and earn
Suspended	Temporarily blocked (e.g. active dispute or policy issue)
Blocked	Permanently removed from the platform

Badge Level	Requirements
Level 1 — Verified Teacher	Email verified + Mobile verified + Identity verified
Level 2 — Certified Teacher	Verified Teacher + Qualification documents approved
Level 3 — Top Educator	25+ classes completed + rating above 4.5
Level 4 — Featured Educator	Admin selection + consistent performance

1.5 Global Payment Architecture

	India	International
Student payments	Razorpay	Stripe
Teacher payouts	Razorpay Payouts (Bank Transfer / UPI)	Stripe Connect (Bank Transfer)

Platform-Specific Pricing (confirmed final)

	HidayahConnect	TeachUsConnect
Teacher registration fee (India)	₹399, one-time, lifetime access	₹499, one-time, lifetime access
Teacher registration fee (International)	\$9.99, one-time, lifetime access	\$9.99, one-time, lifetime access (assumed same as HidayahConnect — not independently confirmed)
Platform commission	30% (teacher retains 70%)	28% (teacher retains 72%)

These are two genuinely different pricing structures, confirmed final by the founder — not a shared rate. Every registration-fee and commission figure elsewhere in this document should be read as platform-specific: use the HidayahConnect column when the teacher/course is on HidayahConnect, and the TeachUsConnect column when it's on TeachUsConnect.

2. Complete Teacher Journey

This section covers everything from a teacher's first Google search through admin approval and dashboard access. Course creation itself is detailed separately in Section 3.

2.1 Discovery & Landing Page

Teacher opens Google

↓ Searches “Online Quran Teaching Jobs” (or equivalent for TeachUs)

↓ Google search result

↓ Clicks Hidayah Connect

↓ Website opens — Landing Page

↓ Reads Hero Banner

↓ Reads Features

↓ Reads Earnings potential

↓ Reads How It Works

↓ Reads Testimonials

↓ Reads FAQ

↓ Clicks “Become a Teacher”

IF the teacher already has an account (previously registered, then logged out or reinstalled the app): they do NOT click “Become a Teacher.” The landing page always shows a separate, equally visible “Login” option, which takes a returning teacher straight to the login screen instead of registration.

2.2 Registration

Registration is a 7-step wizard. Each step ends with Next / Previous (Previous is disabled only on step A). Progress is auto-saved after every step, so a teacher who leaves mid-registration resumes exactly where they stopped the next time they log in.

Step A — Account Creation

Field	Type / Options	Notes
Platform	HidayahConnect / TeachUsConnect	Required — which teacher does this become? Determines the registration fee and commission rate applied from this point on (Section 1.5)
Full Name	Text	Required
Email Address	Email, verified via OTP	Required, unique
Mobile Number	Phone, verified via OTP	Required, unique
Country	Dropdown	Required — determines fee currency & payout rail
Gender	Male / Female / Other	Required

On submit: Email OTP sent → verified. Mobile OTP sent → verified. Status becomes Account Created. Next.

Step B — Registration Fee

Field	Type / Options	Notes
Registration fee	HidayahConnect: ₹399 (India) / \$9.99 (International). TeachUsConnect: ₹499 (India) / \$9.99 (International)	One-time, lifetime access — no recurring subscription. Amount shown depends on the Platform selected in Step A
Coupon code	Optional text field	Applies discount if valid
GST	Auto-calculated for India	Shown before payment
Payment method	Razorpay (India) / Stripe (international)	Card, UPI, netbanking, wallet depending on gateway

On successful payment: invoice generated and emailed. Status becomes Registration Completed. Next.

IF payment fails: show Retry, Try a Different Payment Method, or Cancel. No account progress is lost — the teacher returns to this same step.

Step C — Profile Setup (Personal & Professional)

Field	Type / Options	Notes
Profile photo	Image upload	Required
About me	Long text	Required
Date of birth	Date	Required
Nationality	Dropdown	Required
State / City	Dropdown / text	Required
WhatsApp number	Phone	Optional
Languages known	Multi-select	Required
Preferred teaching language	Dropdown	Required
Time zone	Auto-detected, editable	Required

Field	Type / Options	Notes
Highest qualification	Dropdown	Required
Islamic qualification (Hidayah Connect only)	Dropdown	Conditional on platform
University / Institute	Text	Optional
Years of experience	Number	Required
Teaching categories & subjects	Multi-select from platform-specific category list (Sec. 1.5 / 3.1)	Required
Curriculum(s) taught	Multi-select	TeachUs: CBSE/ICSE/State Board/GCSE/IB
Preferred age group	Multi-select	Required
Preferred student gender	Male / Female / Both	Required — mirrors the mandatory gender filter students use
Teaching mode	One-to-One / Group / Both	Required
Profile fee type	Dropdown: Hourly / Monthly / Per Course	Required
Profile fee amount	Number	Required — paired with the fee type above

Current occupation and a standalone Availability calendar have been removed from this step — occupation isn't needed, and availability is set once, per course, in Course Creation Step 5 (Section 3), so asking for it again here was redundant. The profile fee type/amount above is a general “starting from” indicator shown on the teacher's public profile (e.g. “From ₹800/hr”) — it does not set actual pricing. Each course's real price is configured independently in Course Creation, Step 7a. This two-tier structure is confirmed: it lets students browsing the marketplace get a rough sense of a teacher's rates before opening their profile, the same way marketplaces like Udemy or Upwork show a “starting at” price, while the actual price students pay is always the one set on the specific course.

Next. Status becomes Profile Completed.

Step D — Identity Verification (KYC)

Field	Type / Options	Notes
ID type	Aadhaar / Passport / National ID / Driving License (any one)	Required
Upload — front	Image/PDF upload	Required
Upload — back	Image/PDF upload	If applicable to ID type
Live selfie	In-app camera capture	Required
Face verification	Automated match against ID photo	Automated
OTP	Sent to registered mobile/email	Final confirmation step

Status becomes Identity Verified. Next.

Step E — Qualification Documents (Optional)

Field	Type / Options	Notes
Degree certificate	Upload	Optional
Ijazah certificate (Hidayah Connect)	Upload	Optional
Hafiz certificate (Hidayah Connect)	Upload	Optional
Teaching license / certificate	Upload	Optional
Professional certifications	Upload (multiple)	Optional
Resume	Upload	Optional
Experience letter	Upload	Optional
Police verification	Upload	Optional
Video introduction	Video upload, 60-120 sec suggested	Optional but strongly encouraged

Teachers who skip this step can still teach — they simply carry the Level 1 (Verified Teacher) badge instead of Level 2 (Certified Teacher) until they submit and get these approved.

Next.

Step F — Payout Setup

Field	Type / Options	Notes
International — Stripe Connect	Legal Name, Date of Birth, Address, Country, Bank Account	Stripe verifies identity, banking details, payout eligibility → Payout Ready
India — Razorpay	Account Holder Name, Bank Account Number, IFSC Code, PAN Number	→ Bank Verified

Next.

Step G — Review & Submit

Shows every field entered across Steps A–F for final review, with an Edit link back to each step. On Submit: status becomes Pending Verification and the admin team is notified.

2.3 Admin Review

Admin receives notification

↓ Opens Admin Dashboard → Verification Queue

↓ Reviews profile, identity documents, qualification documents (if submitted), payout setup

↓ Checklist: Email Verified ✓ · Mobile Verified ✓ · Profile Complete ✓ · Identity Verified ✓ · Payout Setup Complete ✓ · Qualification Verified (optional) ✓

↓ Decision: Approve / Reject / Request Additional Information

IF Rejected: reason is shown to the teacher → teacher uploads new/corrected documents → resubmits → back into the Verification Queue.

IF Request Additional Information: teacher is notified of exactly what's missing and can add it without re-submitting the whole application.

On Approve: teacher receives a “Congratulations — your account is approved” notification. Status becomes Active Teacher. Teacher logs in and the Dashboard opens.

2.4 Teacher Dashboard

The dashboard is the teacher's home screen after login and contains:

Module	Module	Module
Profile Completion %	Wallet	Upcoming Classes
Students	Courses	Messages
Announcements	Performance Analytics	Ratings
Calendar	Notifications	Support
Settings	Create Course	Payout
Subscription (Recording Pass)	Certificates	Community
Referral	Help Center	

The Subscription (Recording Pass) module is where a teacher sees, at a glance, whether recording is active on their account and how many of their 3 course slots are in use (e.g. “Active — 2 of 3 courses”) — the same status shown inline during Course Creation Step 7c (Section 3). The Support module is where a teacher raises a help ticket for any issue — see Section 13 for the full ticketing system.

3. Course Creation — Field Specification (12 Steps)

This supersedes the earlier 7–8 phase outline with the finalized, more precise workflow. Objective: let teachers build professional, marketplace-ready courses with no schedule conflicts, proper pricing, and complete lesson planning.

Step 1 — Start New Course

Teacher clicks Create New Course, then:

Field	Type / Options	Notes
Platform category	Hidayah Connect: Quran Reading, Tajweed, Hifz, Arabic, Islamic Studies, Kids Islamic Learning, etc. TeachUs: Mathematics, Science, English, Coding, Languages, CBSE, ICSE, GCSE, IB, etc.	Required — determines which sub-category list appears next
Sub-category	e.g. Quran → Tajweed → Beginner Tajweed	Required

Status: Course Draft Created.

Step 2 — Course Details

Field	Type / Options	Notes
Course name	Text	Required
Short description	Text, ~160 chars	Required — used in search/listing cards
Detailed description	Rich text	Required
Learning objectives	Bullet list	Required
Prerequisites	Text	Optional
Target age group	Range picker	Required
Women-only checkbox	Checkbox	Optional — Hidayah Connect
Teaching language	Dropdown	Required
Thumbnail image	Image upload	Required
Promo video	Video upload	Optional

Save → Next.

Step 3 — Course Type

Type	Duration	Examples
One-Time Session	1 day	Workshop, Seminar, Webinar, Monthly-tuition demo
Short Course	2–15 days	Ramadan Program, Tajweed Intensive
Monthly Course	16–30 days	Quran Reading, Arabic Learning
Long-Term Course	1 / 2 / 3 / 6 / 9 / 12 months (custom duration allowed)	Hifz Program, Alimah Program, Advanced Tajweed

The system automatically determines the payout model from this duration: ≤ 30 days $\rightarrow$ payout after completion; > 30 days $\rightarrow$ monthly milestone payout (see Section 5).

Step 4 — Course Structure

Teacher defines modules and lessons, e.g. Module 1 – Introduction, Module 2 – Lesson 1, Module 3 – Lesson 2, Module 4 – Assessment, Module 5 – Completion. Each module can contain:

- Video meeting
- PDF
- Notes
- Homework
- Quiz
- Assignment
- Downloadable files

Step 5 — Schedule Setup

Field	Type / Options	Notes
Start date / End date	Date pickers	Required
Days of week	Multi-select (e.g. Mon/Wed/Fri)	Required
Class duration	30 / 45 / 60 / 90 / 120 minutes	Required
Daily time	Time picker (e.g. 9:00–10:00 AM)	Required
Time zone	Auto-selected, editable	Required

Smart Availability Engine (conflict checking)

When a teacher selects a slot (e.g. 9–10 AM), the system checks existing courses for a clash:

- If already booked $\rightarrow$ shown as Unavailable and hidden from future selections.
- If free $\rightarrow$ Slot Available, selection allowed.
- A teacher cannot have two live classes at the same time.
- A configurable buffer (e.g. 10–15 minutes) can be required between classes.
- Timezone conversion for students is automatic.
- Recurring schedules reserve their slots until the course ends.
- Editing a course releases its old slots and revalidates the new ones.

Step 6 — Student Capacity

Teacher selects Maximum Students: 1 (Private), 5, 10, 20, 50, or Unlimited (if permitted).

Step 7a — Pricing

Field	Type / Options	Notes
Fee basis	Hourly / Monthly / Complete course fee (e.g. ₹8,000)	Required
Student payment options	Full Payment (+GST on the platform commission) / 3 Installments / 6 Installments / Monthly Recurring	Teacher chooses which options to offer
Platform commission	Read-only, set by the course's Platform (Step 1): HidayahConnect = 30% · TeachUsConnect = 28%	Teacher receives 70% (HidayahConnect) or 72% (TeachUsConnect)
Discount / coupon	Optional	Teacher-configured
Estimated earnings	Auto-calculated, read-only	Shown live as the teacher adjusts price — GST does not affect this figure, since GST is charged to the student on top of the commission, not deducted from the teacher's share; see Section 5.2 for the full worked calculation

Step 7b — Demo Class Configuration

This is where demo classes actually get configured — attached directly to the course being priced, immediately after Step 7a, so the teacher sets pricing and trial terms together. Full system-level rules are in Section 4; this is the field-level view inside course creation.

Field	Type / Options	Notes
Offer free demo for this course	Toggle (on by default)	Draws from the teacher's shared one-time quota of 3 free demo classes across all their courses — not a monthly reset
Demo class duration	Fixed at 30 minutes (read-only, platform default)	Not teacher-configurable
Allow paid demo after free quota used	Toggle	If on, students can book a paid demo once the teacher's 3 free/month are used up
Paid demo price	₹50 (platform default, read-only)	Shown to the teacher for transparency; not editable at course level

The free-demo quota is a one-time allocation per teacher (included with the one-time registration fee), not per course and not a monthly reset — confirmed: if a teacher runs 3 courses, all 3 draw from the same one-time pool of 3, they do not get 3 demos for each course, and the pool does not refill each month.

Step 7c — Video Recording Add-On

This is where a teacher enables recording for the course being created — the step referenced but not detailed in the earlier version of this document.

Field	Type / Options	Notes
Enable recording for this course	Toggle	Off by default
Recording Pass status	Read-only indicator: Active / Not Subscribed / Slots Full	Pulled from the teacher's account-level Recording Pass (Section 4.4)
Subscribe to Recording Pass	Button, shown only if not already subscribed	₹199/month + GST — takes the teacher to checkout, then returns here

Field	Type / Options	Notes
Course slot used	Read-only counter, e.g. “2 of 3 courses used”	A Recording Pass covers up to 3 courses at once; if all 3 slots are full the teacher must remove recording from another course first
Student cap for this recorded course	Read-only, fixed at 5	Enforced automatically once recording is enabled — Step 6 capacity is overridden downward to 5 if it was set higher

IF the teacher tries to enable recording on a 4th course while all 3 slots are in use: show “Recording slots full — remove recording from another course or wait until next billing cycle” and block the toggle.

Step 8 — Course Policies

Field	Type / Options	Notes
Free trial available	Toggle	Reflects the Step 7b demo setting, shown here read-only for confirmation
Refund policy	Platform default, shown read-only	Platform rules apply
Minimum attendance required	% (platform default 70%)	See Section 5
Certificate issued on completion	Toggle	
Assignment required	Toggle	
Assessment required	Toggle	

Step 9 — Review & Publish

System validates before allowing submission:

- Teacher verified
- Profile complete
- No schedule conflicts
- Pricing valid
- Course content complete
- Thumbnail uploaded, description added
- Duration and capacity selected
- Payment options selected

If validation passes → Submit for Review. Status: Pending Admin Approval.

Step 10 — Admin Review

Admin reviews course quality, category, pricing, compliance, content appropriateness, schedule, and policy compliance. Actions: Approve / Reject / Request Changes.

IF Admin rejects: teacher is notified → edits the course → resubmits, back into the review queue.

On Approve: Status becomes Course Live.

Step 11 — Marketplace Publishing

Once approved, the course appears in the marketplace. Students can search, filter, view details, compare, enroll, pay, and join classes.

Step 12 — Assessment Creation (separate module, appears only after publishing)

Once a course is live, the teacher gets access to Create Assessment, with types:

- Quiz
- MCQ Test

- Subjective Assignment
- Practical Task
- Oral Evaluation
- Homework
- Final Examination
- Completion Certificate rules

Assessments stay linked to the course and can be scheduled after specific lessons or modules.

4. Demo Class System

A feature to help students try a teacher before committing to a full course. The numbers below are confirmed and locked as of the founder's review.

4.1 Free Demo Quota (One-Time, Not Monthly)

Parameter	Value
Free demo classes per teacher	3, one-time — a single lifetime allocation, not a monthly reset
Demo class duration	Fixed at 30 minutes (not teacher-configurable)
Included with	The one-time ₹399 (HidayahConnect) / ₹499 (TeachUsConnect) / \$9.99 (international) registration — no separate charge
Resets	Never — once a teacher has used all 3, every further demo is paid, permanently, for the life of their account

This is a deliberate correction from an earlier draft of this spec, which incorrectly described the quota as resetting every month. It does not reset. A teacher gets 3 free demo classes total, ever, tied to their one-time registration.

4.2 Purchasing Additional Demo Classes

Once a teacher's 3 free (one-time) demo classes are used up, every demo after that is paid, for as long as their account exists:

Parameter	Value
Price per additional demo class	₹50
Configured	During course creation, Step 7b (Demo Class Configuration) — see Section 3

4.3 Where This Appears in the Product

- Course Creation, Step 7b (Demo Class Configuration): toggle to enable demo classes for this course — duration is fixed at 30 minutes — and, once the teacher's one-time free quota is exhausted, allow students to book a paid demo at ₹50.
- Student Journey (Section 6): “Book Trial” uses a free demo slot if the teacher still has any of their one-time 3 remaining, otherwise offers the ₹50 paid demo.
- Teacher Wallet: tracks how many of the one-time 3 demo classes remain and any demo-class revenue collected.

4.4 Recording Add-On

Confirmed and locked:

Parameter	Value
Price	₹199/month + GST

Parameter	Value
Courses coverable per subscription	Up to 3 courses simultaneously
Student cap per recorded course	5 students maximum
Billing cycle	Monthly
Recording lifecycle	Days 1-7: student + teacher access · Days 8-15: teacher-only · Days 16-28: archived, no access · Day 29: permanently deleted

5. Class Delivery, Escrow & Payout

5.1 From Purchase to Payout

Student purchases course

- ↓ Payment (Razorpay / Stripe)
- ↓ Money goes into Hidayah Connect Escrow Wallet (not the teacher wallet)
- ↓ Student joins class(es)
- ↓ Attendance recorded each session
- ↓ Teacher completes class / course
- ↓ Student confirms completion
- ↓ Money remains in escrow through the refund window
- ↓ Refund window ends
- ↓ Platform commission deducted
- ↓ Teacher earnings calculated and transferred to Teacher Wallet
- ↓ Teacher requests withdrawal
- ↓ Admin approves
- ↓ Bank transfer
- ↓ Completed

5.2 GST Treatment on Platform Commission

GST is charged only on the platform's commission — never on the course fee itself, and never on the teacher's share. The teacher's payout (70% for HidayahConnect, 72% for TeachUsConnect) is calculated purely from the course fee and is unaffected by GST. The two platforms carry different commission rates, so the GST amount differs between them even for an identical course fee — both worked below.

HidayahConnect example (30% commission)

Item	Amount
Course fee (example)	₹100.00
Teacher share — 70% (no GST applied)	₹70.00
Platform commission — 30%	₹30.00
GST on commission — 18% of ₹30	₹5.40

Item	Amount
Total charged to the student	₹105.40

TeachUsConnect example (28% commission)

Item	Amount
Course fee (example)	₹100.00
Teacher share — 72% (no GST applied)	₹72.00
Platform commission — 28%	₹28.00
GST on commission — 18% of ₹28	₹5.04
Total charged to the student	₹105.04

The GST amount (₹5.40 vs ₹5.04) is what the platform collects from the student and remits to the government — it is not additional platform revenue in either case. The platform's actual commission revenue is exactly the commission line above, matching the unit economics used in the business plan.

This same logic — GST on the commission portion only, added on top of the course fee, teacher's share untouched — applies uniformly to every payout model below, using each platform's own commission rate.

Domestic (India / Razorpay) vs. International (Stripe)

The 18% figure above applies to domestic transactions processed through Razorpay. For international transactions processed through Stripe, tax is calculated automatically by Stripe based on the payer's registered location (Stripe Tax) rather than a fixed 18% — Stripe determines and applies whatever tax rate is correct for that student's or teacher's jurisdiction.

Installments & Recurring Plans Are Always Paid Upfront

Every payment plan — Full Payment, 3 Installments, 6 Installments, or Monthly Recurring — is pre-paid: the student always pays for a period (e.g. the next month, or the next quarter) in advance, before that period of teaching happens, never billed afterward. GST is calculated the same way on every one of these upfront payments: 18% of that payment's commission slice only, never of the full payment amount. Full Payment, Quarterly, and Half-Yearly are simply different upfront period lengths a teacher can offer — the student always has the choice of a single one-shot payment or a periodic upfront plan.

5.3 Attendance Validation

A session counts toward completion only if minimum 70% attendance is recorded, based on teacher join time, student join time, and session duration (e.g. a 60-minute class requires at least 42 minutes).

5.4 Short Course Payout Model (≤30 days)

Example (HidayahConnect, 30% commission): student's course fee is ₹5,000. Platform commission (30%): ₹1,500. GST on commission (18% of ₹1,500): ₹270. Total charged to the student: ₹5,270. Teacher receives: ₹3,500 — unaffected by GST. Release: after course completion (one-day courses release 2 hours after completion).

Same mechanics on TeachUsConnect, using its 28% commission instead — see Section 5.2 for the side-by-side GST comparison.

5.5 Long Course Payout Model (>30 days)

Example (HidayahConnect, 30% commission): a 6-month course at ₹6,000 total is divided into 6 monthly milestones of ₹1,000 each. Each month: commission (30%) = ₹300, GST on that month's commission (18% of ₹300) = ₹54, so the student's monthly charge is ₹1,054. After that month completes, the teacher receives ₹700 — unaffected by GST. Payout releases monthly; future months stay locked until delivered.

5.6 Platform Default Rules

Platform	Course ≤ 30 Days	Course > 30 Days
Hidayah Connect	Payout after completion	Monthly milestone payout
TeachUs (monthly tuition model)	—	Monthly milestone payout (default release every month)

5.7 Teacher Wallet

Shows Available Balance, Pending Balance, Locked Balance, Withdrawn Balance, Commission Deducted, and Withdrawal History. Minimum withdrawal: ₹500. Withdrawal flow: Teacher requests → bank verification → TDS applied → settlement → completed.

5.8 Student Protection

If a teacher stops teaching mid-course, remaining locked funds stay protected — refundable to the student or transferable to another teacher. Released payments cannot be reversed; the platform fee is non-refundable.

6. Complete Student Journey

This section was previously a high-level flow only. It now covers registration fields, the student profile/settings screen (including payment-method linking), the dashboard, discovery and booking, and everything a student sees and does after enrolling — analytics, attendance, assessments, and messaging with their teacher.

6.1 Student Registration

Field	Type / Options	Notes
Full name	Text	Required
Email address	Email, verified via OTP	Required, unique
Mobile number	Phone, verified via OTP	Required, unique
Country	Dropdown	Required — determines currency & payment gateway
Date of birth	Date	Required — determines whether parent consent is triggered
Parent / guardian name	Text	Required only if student is under 18
Parent / guardian email or mobile	Email / Phone, verified via OTP	Required only if student is under 18 — triggers the full Parent Consent flow in Section 8
Password	Password + confirm	Required

On submit: status becomes Enrollment Status = Active. Student is taken to the dashboard.

IF the student is under 18: registration cannot complete until a parent/guardian has confirmed consent via their own OTP-verified email or mobile — see Section 8 for the complete parent consent and approval flow.

6.2 Student Profile & Settings

Accessible from the dashboard at any time. This is where the student manages their own details and payment setup — the piece missing from the previous version of this document.

Field	Type / Options	Notes
Student ID	System-generated, read-only	Section 15.3
Name / Email / Mobile / Country	Editable text fields	Same as registration; email/mobile changes require re-verification via OTP
Profile photo	Image upload	Optional
Time zone	Auto-detected, editable	Used for class scheduling display
Parent consent status	Read-only: Yes / No / Pending	Editable only by the linked parent/guardian account (Section 8), not the student

Field	Type / Options	Notes
Saved payment method	Card / UPI / Netbanking (via Razorpay) or Card / Bank (via Stripe), tokenized	Required before enabling auto-pay; the platform stores a payment token, not raw bank details, per Razorpay/Stripe standards
Auto-pay for installments / monthly recurring	Toggle	When on, future installments or monthly tuition charge automatically to the saved payment method on the due date
Notification preferences	Toggles per channel (Email / SMS / WhatsApp / Push)	Optional
Change password	Current password + new password	Optional
Delete account	Button, confirmation required	See Section 14 Edge Cases

“Link bank account” is implemented as linking a payment method through Razorpay (India) or Stripe (international) rather than storing raw bank account numbers directly — this matches how teacher payouts are already architected in Section 5 and keeps the platform out of scope for handling bank credentials itself.

6.3 Student Dashboard

The student's home screen after login. Contains:

Module	Module	Module
My Courses	Upcoming Classes	Messages
Analytics	Attendance	Assessments & Grades
Certificates	Wallet / Payment History	Wishlist / Saved Teachers
Notifications	Support	Settings (Section 6.2)

The Support module is where a student raises a help ticket for any issue — see Section 13 for the full ticketing system.

6.4 Discovery & Booking

Google search

- ↓ Website
- ↓ Browse courses
- ↓ Search
- ↓ Apply filters (gender of teacher — mandatory — plus subject, country, language, price range, rating)
- ↓ View teacher profile
- ↓ Read reviews
- ↓ Book trial / demo class (uses teacher's free quota, or ₹50 paid demo if quota exhausted — Section 4)

↓ Purchase full course

↓ Payment → escrow (Section 5.1)

Field	Type / Options	Notes
Course fee	Auto-calculated from course price and chosen payment option	Full / 3 Installments / 6 Installments / Monthly Recurring, per Section 3 Step 7a
GST on platform commission	Auto-calculated: 18% of the commission portion only (30% for Hidayah Connect, 28% for TeachUs), not of the full course fee	Shown as a separate line item at checkout — see Section 5.2 for the worked example
Total amount charged	Course fee + GST on commission	What is actually charged to the student's payment method
Payment method	Saved method from Section 6.2, or add a new one at checkout	Required
Enrollment status	Enrolled / Pending Payment / Failed	Drives what shows in My Courses

6.5 Post-Enrollment: Attendance, Analytics & Assessments

Once enrolled, a course appears in My Courses with its own detail page containing:

Field	Type / Options	Notes
Class schedule	Calendar view, read-only	Pulled from the course's schedule (Section 3, Step 5)
Join class button	Active only within the scheduled window	Launches the live class
Attendance record	Per-session: Present / Absent / % attended	Calculated per Section 5.3's 70% rule
Progress / analytics	Modules completed, time spent, streak	Read-only, auto-updated as the student progresses
Homework & assignments	List with Submit action per item	Matches modules configured in Section 3, Step 4
Assessment results	Score, teacher feedback, pass/fail per assessment	Matches assessment types configured in Section 3, Step 12
Certificate	Download button	Appears only if the course has certificate-on-completion enabled and is complete
Rate & review teacher	Star rating + text review	Available after course completion

6.6 Messaging with Teacher

Available from a course detail page or the teacher's profile, and from the Messages module on the dashboard.

Field	Type / Options	Notes
Message thread	One thread per student-teacher pair, scoped to a course where relevant	Persists across the whole course, not just one session
Compose message	Text field + optional file/image attachment	Required: message body
Send button	Delivers message and triggers a notification to the teacher (Section 12)	
Read receipt	Read-only indicator	Shows when the teacher has seen the message

Flow: student clicks Message → thread opens (or is created if this is the first message) → student types and sends → teacher receives a notification (Email/SMS/WhatsApp/Push per Section 12) → teacher opens Messages on their own dashboard and replies → student is notified of the reply.

If the student is under 18: message threads should be visible to the linked parent/guardian account as well, consistent with the Student Safety System's supervision requirements (Section 6.7).

6.7 Student Safety System (mandatory for Hidayah Connect)

- Parent consent required for students under 18
- Teacher Code of Conduct and Student Code of Conduct
- Class recording consent
- Report Teacher / Report Student
- Safety escalation workflow

See Section 7 for what happens on the teacher's side once a student enrolls, and Section 8 for the complete parent/guardian journey, including consent, approvals, and communication.

7. Teacher Journey — After a Student Enrolls

This is the piece missing from the earlier version of this document: what the teacher actually sees and does once a student books a demo or purchases a course. It picks up the moment Section 6.4's "Payment → escrow" step completes.

7.1 New Enrollment Notification & Student List

The moment a student books a demo or purchases a course, the teacher is notified (Email/SMS/WhatsApp/Push, per Section 12) and the student appears in the teacher's Students module.

Field	Type / Options	Notes
Student name	Read-only	
Enrolled course(s)	Read-only, links to each course	
Enrollment date	Read-only	
Payment / installment status	Read-only: Paid / Partial / Overdue	Reflects Section 3 Step 7a payment option chosen
Attendance %	Read-only, auto-calculated	Section 5.3
Progress %	Read-only, auto-calculated	Modules completed
Parent/guardian contact	Read-only, shown only if student is under 18	Section 8
Message button	Opens the thread with this student (and parent, if applicable)	Section 7.4

7.2 Conducting Classes & Marking Attendance

Teacher opens Upcoming Classes

- ↓ Joins the live class at the scheduled time
- ↓ Conducts the class
- ↓ System auto-records join/leave time and duration per student
- ↓ Teacher reviews and confirms attendance
- ↓ Class marked Completed once the 70% attendance rule is met (Section 5.3)

Field	Type / Options	Notes
Student name	Read-only, one row per enrolled student	
Auto-recorded join time / leave time / duration	Read-only	Section 5.3

Field	Type / Options	Notes
Attendance status	Present / Absent, pre-filled from auto-recorded duration	Teacher can override
Manual override reason	Text field	Required if teacher changes the auto-calculated status — logged for the IF-condition in Section 10 (student marked absent but teacher marked present → Admin Review)

7.3 Homework, Assignments & Assessments

For any course with assignments/assessments enabled (Section 3, Steps 4 and 12), the teacher's course detail page shows a review queue:

Field	Type / Options	Notes
Submission list	Student name, item name, submitted date, status (Pending / Graded)	
Open submission	File/text viewer	
Grade / score	Number or pass-fail, per the assessment type configured	Section 3 Step 12
Feedback	Text field	Optional but recommended
Publish grade	Button — releases the grade to the student's Assessment Results (Section 6.5)	

7.4 Messaging with Students & Parents

Mirrors the student-side messaging in Section 6.6, from the teacher's side.

Field	Type / Options	Notes
Message thread	One per student (or per parent, if the message is parent-initiated)	Section 8.4
Parent-CC indicator	Read-only badge shown on a thread when the student is under 18	Reflects that the parent can also see and post in this thread
Compose / send	Same as Section 6.6	

7.5 Demo-to-Full-Course Conversion

After a student completes a demo class, the teacher can invite them to enroll in the full course directly from the student's record.

Field	Type / Options	Notes
Send enrollment offer	Button on the student's demo record	

Field	Type / Options	Notes
Offer message	Text field, pre-filled with a default template	Editable
Discount code (optional)	Text field	Optional

On send: student (and parent, if under 18, per Section 8.3) receives a notification with a link straight into the Section 6.4 purchase flow for that course.

7.6 Payout Impact

Every enrollment feeds directly into the escrow and payout mechanics already described in Section 5 — this section exists purely to close the loop: attendance marked here (7.2) is what the Section 5.3 attendance rule checks, and grades/completions recorded here (7.3) are what trigger the milestone releases in Section 5.4/5.5.

8. Parent / Guardian Journey & Approval Flow

This is deliberately the lightweight version: no separate parent portal or dashboard to build. A parent gets access using their own registered mobile number, reusing the same login and screens the student already has, gated to what a parent should see. This keeps the engineering scope small while still covering consent, approval, and direct communication with the teacher.

8.1 Parent Consent at Student Registration

Triggered automatically the moment a student's date of birth (Section 6.1) indicates they are under 18.

Field	Type / Options	Notes
Parent/guardian full name	Text	Required
Relationship to student	Dropdown (Parent / Legal Guardian / Other)	Required
Parent mobile number	Phone, verified via OTP	Required, independently verified — not just re-using the student's contact. This number is what the parent later logs in with (Section 8.2)
Consent checkbox — Terms & Student Code of Conduct	Checkbox	Required
Consent checkbox — Class Recording Consent	Checkbox	Required if the teacher/course has recording enabled (Section 4.4)

On submit: Parent Consent Status becomes Yes, and only then does the student's registration (Section 6.1) or a pending course purchase (Section 8.3) proceed. Every future purchase will require the parent's approval — this is not a toggle the parent can turn off (Section 8.3).

If the parent does not complete this step: the student's account remains at Enrollment Status = Pending Consent and cannot book a demo or purchase a course. No separate password is set here — the parent's registered mobile number (with OTP) is their login credential, per Section 8.2.

8.2 Parent Access (Shared Login — No Separate Portal)

A parent does not get a distinct portal or dashboard build. Instead, they log in on the same screen a student would, using their own registered mobile number and an OTP. The system recognizes that number as a linked parent (from Section 8.1) and opens the same course detail, attendance, analytics, assessment, and messaging screens already specified for students in Sections 6.3–6.6 — scoped to the linked child, with the purchase-and-payment actions replaced by the approval flow in Section 8.3 instead of a direct “buy” button.

This reuses every screen already specified for the student side (Sections 6.3–6.6) rather than requiring the dev team to design and build a second, parallel interface — the only new pieces are the mobile-number-based parent login check and the approval gate in Section 8.3.

Because the parent logs in with their own mobile number rather than the student's credentials, this is a separate account — a parent can be logged in at the same time as their child without conflicting with the single-active-session rule that applies to a student's or teacher's own login (Section 10).

8.3 What Requires Parent Approval

Confirmed: every paid purchase requires parent approval, every time — not just once at registration. This keeps the rule simple (one gate, not a tiered permission system to build) and gives parents the most control.

Action	Approval Required?	Flow
Initial student registration	Yes, always	Section 8.1 — blocks registration until complete
Any paid course purchase	Yes, every time	Student selects a course → “Request sent to parent” SMS/notification → parent approves or declines via a link in that notification → if approved, payment is charged to the parent's saved payment method → if declined, student is notified
Linking / changing the saved payment method	Yes, always	Only the parent can add or change the payment method used for a purchase or auto-pay — not the student, refining the assumption in Section 6.2
Teacher's demo-to-full-course offer (Section 7.5)	Yes, every time	Routes through the same approval flow as any other purchase above — one consistent gate rather than a separate path for offers

8.4 Parent Communication with Teacher

A parent can view every message thread involving their child, and can message the teacher directly — the same mechanics as Section 6.6/7.4, with the parent as an additional participant on the thread.

Field	Type / Options	Notes
Message thread	Same thread the student and teacher use — parent is added as a participant, not a separate thread	
Compose / send	Same fields as Section 6.6	
Notify teacher of parent message	Automatic, same notification pattern as Section 12, with a “from Parent” label	

8.5 Notifications to Parent

Every major event affecting the child triggers a parallel notification to the parent, in addition to the student, using the same multi-channel pattern as Section 12:

- New enrollment or demo booking
- Payment charged or payment failed
- Attendance flag (e.g. repeated absence)
- New message from the teacher
- Assessment result published
- Certificate earned

8.6 Revoking Consent & Account Deletion

IF a parent revokes consent: the student's account is suspended from new enrollments and purchases until consent is renewed; courses already in progress continue under the standard refund policy (Section 11), and the change is escalated to Admin for review (Section 9.5).

IF a parent requests full deletion of the child's account: this follows the same process as the "Student deletes account" edge case (Section 14), initiated by the parent rather than the student.

9. Administrator Journey

9.1 Admin Dashboard Modules

Module	Module	Module
Overview	Pending Teachers	Pending Students
Pending Courses	Live Classes	Disputes
Refund Requests	Escrow	Wallet
Revenue	Commission	Subscriptions
Reports	Certificates	Institutes
Support Tickets	Notifications	CMS
Settings		

The Support Tickets module is the admin queue for the ticketing system specified in full in Section 13.

9.2 Teacher Approval Sub-Flow

View Teacher

↓ Documents

↓ Background Verification

↓ Decision: Approve / Reject / Ask for More Documents / Suspend / Blacklist

Field	Type / Options	Notes
Teacher summary	Read-only: name, contact, country, category, submitted date	
Document viewer	Inline preview of identity + qualification uploads	Section 2.2 Steps D & E
Verification checklist	Read-only checkboxes: Email / Mobile / Profile / Identity / Payout / Qualification (optional)	Mirrors Section 2.3
Decision	Approve / Reject / Request More Info / Suspend / Blacklist	Required
Rejection reason	Text field	Required if Decision = Reject

9.3 Course Approval Sub-Flow

Admin reviews course quality, category, pricing, compliance, content appropriateness, schedule, and policy compliance (see Section 3, Step 10), then Approves, Rejects, or Requests Changes.

Field	Type / Options	Notes
Course summary	Read-only: name, teacher, category, price, schedule, capacity	Pulled from Section 3, Steps 1–8
Recording / demo configuration	Read-only view of Step 7b/7c settings	So admin can confirm the recording slot cap and demo pricing are correctly applied
Decision	Approve / Reject / Request Changes	Required
Rejection / change-request reason	Text field	Required if not Approve

9.4 Escrow, Refund & Dispute Management

Admin has full visibility into escrow balances, pending/released payouts, refund requests, and disputes, and is the final decision-maker on refund approvals (Section 11) and disputed escrow releases.

Field	Type / Options	Notes
Escrow balance view	Read-only, filterable by teacher/course/student	
Refund request queue	List with student, course, reason, evidence, status	Section 11
Decision	Approve Refund / Reject Refund	Required
Dispute notes	Text field, internal	Optional, for audit trail

9.5 Student & Parent Management

Field	Type / Options	Notes
Student list	Filterable by status, country, enrollment	
Student detail view	Read-only: profile fields from Section 6.2, enrollment history, payment history, message threads (for safety review)	
Linked parent/guardian detail	Read-only: consent status, consent date, approval settings (Section 8.3)	Shown on any student under 18
Suspend / reinstate student	Action button + reason field	Used for Code of Conduct violations
Review consent revocation	Queue item, appears when a parent revokes consent (Section 8.6)	Admin confirms the account is correctly restricted

10. Conditional / IF-ELSE Flows

Every condition below must be explicitly handled in the build — these are the scenarios most likely to be missed if not documented up front.

Condition	Then
Teacher already has an account	Show Login (not registration) — landing page always shows both options clearly
Forgot password	OTP → Reset Password
Teacher rejected at admin review	Reason shown → upload new documents → resubmit
Admin rejects a course	Teacher notified → edit course → resubmit
Payment failed	Retry → try a different payment method → or cancel
Student marked absent but teacher marked them present	Goes to Admin Review for resolution
Teacher absent for a scheduled class	Student refunded → teacher penalty applied → wallet adjustment
Teacher cancels a class	Student notified → reschedule offered → refund if not rescheduled → wallet update
Student cancels	Refund policy applied → cancellation charges if applicable → wallet update
Teacher or student logs in on a new device while already logged in elsewhere	Single active session enforced per account — the previous device is automatically logged out and the new device becomes active. This does not affect a linked parent's login (Section 8.2), which is a separate account and can be active at the same time without restriction.

11. Refund Policy

This section is the full refund policy — not just the technical flow. It's written to double as the actual customer-facing text for the Teacher FAQ and Student FAQ, so the wording here should be treated as close to final as the underlying numbers allow. Five specific numbers below were never defined anywhere else in this spec; each is marked “DECISION NEEDED” with a proposed default. Everything else is drawn directly from the escrow, payout, and dispute mechanics already specified in Sections 5, 9, and 13.

11.1 How Payment Is Protected

When a student pays for a class or course, the money doesn't go directly to the teacher — it's held in escrow until the class is actually delivered (Section 5.1). This is what makes refunds possible at all.

- One-time session or short course (up to 30 days): payment is held until the course is marked complete.
- Monthly or long-term course: payment is split by month — only the month currently being taught is at risk; every future month stays fully protected in escrow until it's actually delivered (Section 5.5).

Once a payment is released to a teacher — after successful delivery and the refund window (11.6) has passed — it can no longer be refunded through this policy (Section 5.8).

11.2 Teacher Registration Fee — Non-Refundable

The one-time teacher registration fee — ₹399 (HidayahConnect, India) / ₹499 (TeachUsConnect, India) / \$9.99 (international, both platforms) — is non-refundable once payment completes. This fee covers lifetime marketplace access, not a specific class or course, so it isn't eligible for a refund even if a teacher later decides not to teach.

11.3 Course & Class Fee Refunds

One-Time Sessions & Short Courses (1-30 days)

- Full refund if the teacher cancels the class and the student doesn't accept a reschedule.
- Full refund if the teacher doesn't show up for a scheduled class.
- If the student cancels before the class or course starts, see 11.4 for the cutoff that determines a full or no refund.
- Once the class or course is marked complete and the refund window (11.6) has passed, payment releases to the teacher and is no longer refundable.

Monthly & Long-Term Courses (31 days - 12 months)

- Billed and released one month at a time (Section 5.5).
- If a student stops partway through, every month that hasn't happened yet is still in escrow and fully refundable.
- A month already delivered and released to the teacher is not refundable, even if the student cancels the rest of the course.

Installment & Monthly Recurring Payments

- If a student cancels, any installment already paid for classes that haven't happened yet is refunded from escrow.
- Any future installment that hasn't been charged yet simply isn't collected — there's nothing to refund there.

11.4 When a Refund Applies

Situation	Outcome
Teacher doesn't show up for a scheduled class	Full, automatic refund for that class — see Scenario 2, Section 16
Teacher cancels a class	Student is offered a reschedule first; if they decline or none works, full refund
Student cancels with enough notice (see cutoff below)	Full refund
Student cancels after the cutoff, or after the class has started	See cutoff decision below
A platform-side technical failure prevents the class happening	Full refund
Student was charged twice for the same booking (duplicate payment)	Full refund of the duplicate charge, automatically
Recording feature doesn't work as purchased	Reviewed case-by-case via a Support ticket (Section 13)

DECISION NEEDED — Student cancellation cutoff. Proposed: full refund if the student cancels more than 24 hours before the scheduled class; no refund if they cancel within 24 hours of the scheduled start, since the teacher has likely already turned

away other bookings for that slot. This mirrors common practice on similar platforms, but was never set anywhere in the existing spec — please confirm the 24-hour figure, or specify a different one.

11.5 How a Refund Is Requested and Decided

Student opens My Courses, selects the class or course, and chooses Request Refund — or raises it directly through Help / Support (Section 13.1) under the “Payment Issue” or “Dispute” category

- ↓ States the reason, attaches a screenshot or other evidence if available
- ↓ Admin may ask the teacher to respond before making a decision
- ↓ Admin decision: Approved → Escrow Refund to student. Rejected → funds released to teacher as originally scheduled
- ↓ Student is notified of the outcome (Section 12)

DECISION NEEDED — Refund decision timeline. Proposed: 5 business days from when the student raises the request to when a decision is given. Not previously defined — confirm this works, or specify a different number to commit to publicly.

11.6 Refund Window

DECISION NEEDED — Refund window length. Proposed: refunds must be requested within 7 days of a class or course (or course month) being marked complete. After 7 days, payment automatically releases to the teacher and can no longer be refunded through this policy. This number wasn't set anywhere in the existing spec, which only says a “refund window” exists before escrow releases (Section 5.1) — please confirm 7 days, or specify a different number. Whatever is chosen here should be enforced by the app, not just stated in the policy.

11.7 Demo Classes

DECISION NEEDED — Demo class refund treatment. Proposed: demo classes (a teacher's one-time allocation of 3 free classes — see Section 4.1, this is NOT a monthly benefit — or the ₹50 paid demo once that one-time quota is used) are not eligible for a cash refund, given how low the cost is. If a demo doesn't happen because the teacher didn't show up, the student receives a replacement demo credit instead of a cash refund. This wasn't addressed anywhere in the existing spec — please confirm this approach, particularly whether the ₹50 paid demo should be treated the same as the free ones.

11.8 Video Recording Pass

DECISION NEEDED — Recording Pass refund treatment. Proposed: the ₹199/month Recording Pass is non-refundable once a billing period has started, since recording access for that month has already been enabled. A teacher can cancel anytime to stop future billing, but the current month already paid for isn't refunded partway through. Not addressed in the existing spec — please confirm.

11.9 Platform Fees Are Never Refundable

Even when a course fee is refunded, the platform's commission and any GST already charged on that commission (Section 5.2) are not refunded — only the amount that would otherwise have gone to the teacher is returned to the student. This matches the existing payments spec, which states platform fees are non-refundable (Section 5.8).

11.10 How Refunds Are Paid

Refunds go back to the student's original payment method — Razorpay for India, Stripe for international payments — and typically reflect within 5-7 business days, depending on the bank or card provider.

11.11 Disputes

If a student disagrees with a refund decision, they can escalate through the same Support ticket (Section 13) rather than opening a new one — see Scenario 8, Section 16, for a worked example.

11.12 Summary — Decisions Needed Before Publishing

Everything else in this policy is drawn directly from the existing product spec. These five numbers are not — please confirm or change each one before this goes live to teachers and students:

#	Decision	Proposed Default
1	Student cancellation cutoff for a full refund (11.4)	24 hours before the scheduled class
2	Refund decision timeline (11.5)	5 business days
3	Refund request window after class/course completion (11.6)	7 days
4	Demo class refund treatment (11.7)	No cash refund; replacement credit if the teacher no-shows
5	Recording Pass refund treatment (11.8)	Non-refundable once a billing month has started

12. Notifications Matrix

Every meaningful action triggers a notification across all channels. Example — Teacher Registered:

Teacher Registered

↓ Email

↓ SMS

↓ WhatsApp

↓ Push Notification

↓ Admin Notification

The same multi-channel pattern (Email / SMS / WhatsApp / Push / relevant Admin alert) should apply to every status change referenced elsewhere in this document — approvals, rejections, payments, payouts, refunds, and disputes. This includes every ticket status change in the Support Ticketing System (Section 13): ticket created (to admin), and In Progress / Resolved / Closed (to the user who raised it).

13. Support & Ticketing System

This is the general-purpose resolution mechanism referenced by “Support” on the teacher dashboard (Section 2.4), “Support” on the student dashboard (Section 6.3), and “Support Tickets” on the admin dashboard (Section 9.1) — those modules were named but never specified in detail until now. Rather than building a separate resolution path for every edge case in Section 14, most issues that a person (not the system) needs to look at flow through this single ticketing system, so the dev team builds one queue and one review screen for admin instead of many one-off flows.

13.1 Raising a Ticket

Available from the Help / Support module on both the teacher and student dashboards, and contextually from specific screens (e.g. a failed payment, a course showing a technical issue) with the relevant record pre-filled.

Field	Type / Options	Notes
Category	Dropdown: Payment Issue / Payout Issue / Technical or Recording Issue / Account Issue / Course or Enrollment Issue / Dispute / Other	Required
Related record	Auto-filled if raised contextually (Course ID / Payment ID / Payout ID); otherwise optional	Helps admin locate the issue immediately
Subject	Text	Required
Description	Long text	Required
Attachments	Image/file upload (e.g. screenshot, payment receipt)	Optional
Priority	Auto-suggested from category (e.g. Payment/Payout Issue defaults to High), editable	Required

On submit: a Ticket ID is generated, the user gets a confirmation, and admin is notified (Section 12 pattern) with the ticket appearing in their Support Tickets queue.

13.2 Admin Ticket Queue & Resolution

Field	Type / Options	Notes
Ticket list	Filterable by status, category, priority, raised-by type (student/teacher)	
Ticket detail	All fields from Section 13.1, plus the requester's profile and the related record's detail (e.g. the actual payment or payout)	
Status	Open / In Progress / Awaiting User Response / Resolved / Closed	Required
Assigned to	Admin/support staff member	Optional

Field	Type / Options	Notes
Internal notes	Text, admin-only	Not visible to the user
Resolution notes	Text, visible to the user once marked Resolved	Required to close a ticket

Flow: Admin opens the ticket → reviews the related record → takes any direct platform action needed (e.g. manually releasing a stuck escrow payout, correcting a duplicate charge, re-triggering a failed course enrollment) → adds resolution notes → marks Resolved → user is notified and can reopen the ticket if unsatisfied within a set window, after which it auto-closes.

Disputes that already have a dedicated flow — refunds (Section 11) and escrow disputes (Section 9.4) — can still be raised as tickets for visibility and tracking, but the actual decision continues to go through those existing admin screens rather than being re-built inside the ticket itself.

13.3 Ticket Categories → Existing Sections

Category	Routes to / Related Section
Payment Issue (e.g. duplicate payment, payment succeeded but enrollment failed)	Admin reviews the Payment table (Section 15.6) directly from the ticket
Payout Issue (e.g. failed payout)	Admin reviews the Payout table (Section 15.7) and Teacher Wallet (Section 5.7)
Technical / Recording Issue (e.g. recording failure, disconnect disputes)	Admin reviews the affected class/course; may trigger a manual credit or reschedule
Account Issue (e.g. teacher account deletion request, suspension appeal)	Admin reviews Teacher/Student management (Section 9.2, 9.5)
Course / Enrollment Issue	Admin reviews the Course table (Section 15.2) and enrollment record
Dispute	Routes into the existing Refund Policy (Section 11) or Escrow Dispute Management (Section 9.4)

14. Edge Cases

Often missed in a first build but critical to handle. Each is mapped below to how it actually gets resolved — most either happen automatically, are self-service, are already covered by an existing flow, or go through the Support Ticketing System (Section 13).

Edge Case	Resolution Path
Login from multiple devices	System policy, confirmed: single active session per teacher/student account (new device logs out the old one); a linked parent's separate login is unaffected (Section 8.2) — no ticket needed
Teacher changes bank account	Self-service in Payout Setup (Section 2.2, Step F); a Support Ticket only if verification then fails
Student changes timezone	Self-service in Settings (Section 6.2)
Internet disconnects during class	Handled by attendance auto-recording (Section 7.2); student/teacher can raise a Support Ticket to dispute the resulting attendance record
Recording failure	Support Ticket — Technical / Recording Issue
Partial refund / full refund	Existing Refund Policy (Section 11) — can be raised as a ticket for tracking, decision stays in that flow
Duplicate payment	Support Ticket — Payment Issue
Failed payout	Support Ticket — Payout Issue (after any automatic retry fails)
Teacher inactive for 90 days	System-triggered flag for Admin review — no ticket needed, admin-initiated
Subscription (recording pass) expires during an active course	System notification to the teacher (Section 12); Support Ticket only if the teacher disputes the timing
Student deletes account	Self-service, with confirmation step — not a ticket
Teacher requests account deletion	Support Ticket — Account Issue, since this needs admin review before completion
Admin suspends a teacher mid-course	Admin-initiated (Section 9.2); teacher can raise a Support Ticket to appeal
Teacher uploads an invalid certificate	Handled in Admin Review (Section 2.3); teacher can raise a Support Ticket to dispute a rejection
Payment succeeds but course enrollment fails	Support Ticket — Payment Issue (high priority by default)
Escrow release blocked due to an open dispute	Existing Escrow Dispute Management (Section 9.4) — can be raised as a ticket for tracking
Auto-expiry of trial/demo classes	System-automated — no ticket needed
Missed-class rescheduling rules	Self-service reschedule where available; Support Ticket if teacher and student can't agree

15. Database Field Reference

15.1 Teacher Table

Field
Teacher ID
Platform (HidayahConnect / TeachUsConnect)
Full Name
Email
Mobile
Country
Gender
Profile Photo
Bio

15.9 Admin Controls

- Teacher Approval, Course Approval, Identity Verification Review, Qualification Review
- Payment Monitoring, Payout Monitoring
- Dispute Management, Refund Management
- Teacher Suspension, Student Suspension, Parent Consent Revocation Review
- Support Ticket Management (Section 13)

16. Worked Scenarios — End-to-End Examples

Everything above documents the pieces — fields, flows, and rules — one section at a time. This section walks a handful of realistic situations all the way through, pulling several sections together, so the dev team can see exactly how they connect in practice. Each one cites the sections it draws from.

Scenario 1: Student cancels a short course before it starts

A student books a 10-day Tajweed Intensive on HidayahConnect for ₹2,000, paying in full. Two days before the course starts, they change their mind.

Student pays ₹2,000 + GST on the ₹600 commission (30%) — total charged ₹2,108 (Section 5.2)

↓ Money sits in escrow, Locked (Section 5.1)

↓ Student opens My Courses → Request Refund (Section 11)

↓ Because this is more than 24 hours before the course start, the cancellation cutoff is met (Refund Policy, Section 4)

↓ Refund approved — full ₹2,108 returned to the student's original payment method

↓ Course removed from the teacher's upcoming schedule; the freed slot becomes available again

Result: Full refund. Teacher earns nothing from this booking — they never delivered anything, so there's no payout to protect.

Scenario 2: Teacher doesn't show up for a scheduled class

A HidayahConnect student has paid ₹1,000 for a one-time Quran webinar. At the scheduled time, the teacher never joins.

Session start time passes with Teacher Join Time never recorded (Section 5.3 attendance rule)

↓ System flags the class as a no-show once the scheduled window closes

↓ Automatic full refund triggered — ₹1,000 + GST returned to the student, no refund request needed (Refund Policy, Section 4)

↓ Teacher's wallet is not credited — no delivery occurred

↓ A penalty / wallet adjustment is applied to the teacher's account per the platform's no-show policy (Section 10 conditional flow: "Teacher absent for a scheduled class")

↓ Both student and teacher receive a notification explaining what happened (Section 12)

Result: Full automatic refund to the student. No dev-side ambiguity here — this should never require a manually-raised Support ticket, since the system already knows the teacher never joined.

Scenario 3: Long-term course, student cancels partway through

A student is 3 months into an 8-month Hifz Program on HidayahConnect, paying ₹1,000/month (₹8,000 total course fee). They decide to stop after month 3.

Months 1-3 already completed: each month's ₹700 (70%) was released to the teacher after that month finished (Section 5.5) — those payouts are final and not reversible (Section 5.8)

↓ Month 4 payment, already collected from the student, is still sitting in escrow, Locked — that month hasn't been taught yet

↓ Student requests to stop the course via My Courses → Request Refund

↓ Admin reviews (Section 9.4) — since months 1-3 were genuinely delivered, only the un-delivered portion is in question

↓ Month 4's escrowed amount is refunded to the student; months 5-8 were never charged, so there's nothing to refund there

Result: Partial refund — exactly one month's worth. Months already taught and paid out stay paid out; only the untaught, still-escrowed month comes back.

Scenario 4: Student uses a free demo, then upgrades to the full course

A student books a free 30-minute demo with a TeachUsConnect Mathematics teacher — the last of that teacher's one-time allocation of 3 free demos. They like the class and want to enroll properly.

Demo booked using the last of the teacher's one-time free-demo quota (Section 4.1) — no charge to the student

↓ Demo class delivered

↓ Teacher sends a demo-to-full-course enrollment offer from the student's record (Section 7.5)

↓ Since this is a purchase, it routes through the same rule as any other purchase (Section 8.3) — IF the student is under 18, a parent-approval request is sent before payment proceeds

↓ Student (or approving parent) completes payment for the full course at TeachUsConnect's rate: 28% commission, GST calculated on that commission only (Section 5.2)

↓ Course appears in the student's My Courses; escrow flow begins as normal (Section 5.1)

Result: No cash changed hands for the demo itself. The paid enrollment that follows is a completely ordinary purchase — the only thing special about it is where the student came from.

Scenario 5: Teacher tries to enable recording on a 4th course

A HidayahConnect teacher already has the ₹199/month Recording Pass active on 3 courses (the maximum). They try to enable recording on a 4th course.

Teacher opens Course Creation, Step 7c (Section 3) for the 4th course

↓ System checks Recording Course Slots Used against the cap of 3 (Section 4.4, Teacher Table Section 15.1)

↓ Slots already full → toggle is blocked

↓ Message shown: "Recording slots full — remove recording from another course or wait until next billing cycle" (Section 3, Step 7c)

Result: The 4th course can still be created and published — it simply can't have recording enabled until the teacher frees up a slot on one of the other 3.

Scenario 6: Payment succeeds but the student never gets enrolled

A student pays for a HidayahConnect course. The payment gateway confirms success, but a technical error means the course never actually appears in their My Courses.

Student notices the course missing, opens Help / Support (Section 13.1)

↓ Raises a ticket: Category = Payment Issue, Related Record = the Payment ID from their payment confirmation

↓ Ticket lands in the admin queue at High priority by default for this category (Section 13.1)

↓ Admin opens the ticket, checks the Payment table (Section 15.6) and Course/Enrollment record (Section 15.2)

↓ Admin manually completes the enrollment (or triggers a refund if the course is no longer available) and adds resolution notes

↓ Student is notified the ticket is Resolved

Result: This is exactly the kind of gap the Support Ticketing System (Section 13) exists to catch — a technical failure that the automated flows alone wouldn't resolve.

Scenario 7: Under-18 student wants to enroll in a paid course

A 15-year-old student, registered with parent consent already on file, tries to purchase a ₹3,000 HidayahConnect course.

Student selects the course and proceeds to Section 6.4's purchase flow

↓ System checks Parent Consent Status (Section 6.1) — confirmed Yes, parent linked

↓ Because every purchase requires parent approval, not just registration (Section 8.3), the purchase pauses here

↓ Parent receives an SMS/notification: “Request sent to parent”, with a link to approve or decline

↓ Parent logs in with their own registered mobile number (Section 8.2 — no separate portal, same screens as the student side) and approves

↓ Payment is charged to the parent's saved payment method, not the student's (Section 8.3)

↓ Course appears in the student's My Courses; parent can see it too via their linked access

Result: The student picked the course, but the parent's approval and payment method are what actually completed the purchase — the student alone can't finish a purchase without that step.

Scenario 8: Refund dispute — student and teacher disagree

A student requests a refund on a HidayahConnect course, claiming the teacher didn't cover what was promised. The teacher disagrees and says the course was delivered as described.

Student raises the refund via My Courses → Request Refund, stating the reason (Section 11.5)

↓ Admin requests the teacher's response before deciding — teacher explains their side

↓ Admin reviews both accounts, plus attendance and course records, and makes a decision within the refund decision timeline (Section 11.5)

↓ IF the student disagrees with the outcome: they escalate through the same Support ticket rather than opening a new one (Section 11.11) — the team takes a second look

↓ Final decision stands once the escalation review is complete

Result: This is the one refund scenario where the outcome genuinely depends on human judgment, not automation — the system's job is to get both sides in front of admin with the right evidence, not to decide who's right.

Scenario 9: Student requests a refund after the window has closed

A HidayahConnect student completed a short course 10 days ago. They now want a refund, but the refund window (proposed at 7 days — Section 11.6) has already passed.

Student opens My Courses → Request Refund

↓ System checks the completion date against the refund window (Section 11.6)

↓ Window has expired — the course's escrow funds already auto-released to the teacher once the window closed

↓ Refund request is declined automatically, with the reason shown to the student (window expired)

↓ Student can still raise a Support ticket if they believe there were extenuating circumstances (Section 13.1) — but this is now a manual exception review, not a standard refund

Result: No refund through the standard flow — the money already moved to the teacher's wallet once the window closed. This is exactly why the refund window (Section 11.6) needs to be enforced by the app itself, not just stated in the policy.

Scenario 10: Student is charged twice for the same booking

A payment gateway hiccup causes a HidayahConnect student to be charged ₹2,108 twice for the same course.

Payment system detects two successful charges for the same student, course, and amount within a short window

↓ Flagged automatically as a likely duplicate payment (Section 11.4)

↓ Duplicate charge is refunded automatically — no refund request needed from the student

↓ The original (first) payment proceeds through the normal escrow flow (Section 5.1) as if nothing happened

↓ Student receives a notification explaining the duplicate was detected and refunded

Result: Full, automatic refund of just the duplicate charge. This should never need a Support ticket or admin review — it's detectable and fixable by the system alone.
